# Look and Feel Standards for e Government

Michigan.gov brand elements, policies, information architecture

## About This Document

### Note To All Project Managers And Web Development Teams:

No standards document can take into account every possible combination of web technology. Therefore, it is the responsibility of the IT Project Manager or responsible agent to contact EWD to inquire and receive the latest updates and specifications regarding information contained within this document.

This document is intended to communicate important information architecture design and development standards to IT Project Managers and web design teams. It details the appearance system and requirements for e-government web sites operating within the State of Michigan. The standards in this document apply to all web sites produced and maintained by and for the State of Michigan for the purpose of conducting official state business over the World Wide Web or Internet. This includes internal or external facing sites, intended for consumer, business or other government on-line service audiences.

The intention is to better serve users, whether general citizens or targeted constituents. More importantly, web Development Teams need to read and understand the information contained within this manual. It includes important information about key, required presentation style elements for all State of Michigan on-line services. These include a consistent and common look and feel across all sites, improved ease of use and overall usability, and reduced time-to-launch through the application of uniform design attributes.

Based on project management methodologies and the System Development Life Cycle (SDLC), it is imperative that contact with e-Michigan Web Development (EWD) be made as soon as possible, preferably at the Initiation Phase of a web based on-line service solution. Subsequent phases such as Design Requirements will also benefit from this document and review meetings. Review meetings cover a variety of issues ranging from enterprise deliverables, look and feel, policies, security, load testing, usability and pre-launch checklists.

To schedule a review meeting, contact the EWD at (517) 241-5780 and ask for the Project Delivery Coordinator. They will be able to communicate specific changes that may be underway with any one of these elements as well as serve as the single point of contact in the review effort.

State IT Development Teams, as well as third party development groups contracted or bidding on state IT initiatives, should use these standards as a reference in preparing overall project plans and constructing specific web based applications.

## Copyright Information

All aspects of the Michigan.gov Brand as visualized in the banner header graphic (lighthouse image) in this document, either printed or electronic, are under the express control of the Department of Information Technology/e-Michigan Web Development Division. Attempts to modify or recreate the Michigan.gov brand image or graphic elements represented within this document are prohibited.

Requests for any Michigan.gov brand element should be made to the e-Michigan Web Development Division:

e-Michigan Web Development  
Department of Information Technology  
111 S. Capitol Avenue  
Romney Building 9<sup>th</sup> Floor  
Lansing, MI 48913  
(517) 241-5780

This document may be revised as needed to accommodate new standards or revise and edit existing standards.

Version 2.0

June 03

Copyright © 2003 State of Michigan

Because many of the pages in this document include embedded screen captures, page breaks have intentionally been added so that images and related textual information are kept contiguous. As a result, some pages may appear to be half filled with text.

This document includes images and text best viewed in color. Because of the state's current color printing restrictions, this document is best viewed on screen as a PDF or printed in color from your location.

## Core Policies of the Michigan.gov

### Look and Feel standard

All site designs must incorporate these core policy components

#### Core Policy Components

The Michigan.gov logo combined with the Lighthouse image compose the Michigan.gov brand, established with the portal web site at [www.michigan.gov](http://www.michigan.gov).

During the process of moving all state agency sites to the Vignette Content Management System, additional branding was needed to support the agency home site as well as applications that remained on state or other servers.

Since the first standards document was issued in March 2002, the state has continued to accelerate the number of on-line services available to general consumers, as well as targeted business and government institutions. This document is intended to continue to reaffirm the state's desire to place those standards such as consistent tone, visual brand, common information architecture and navigational elements that define the Michigan.gov state brand identity on all applications regardless of the location or technology platform.

In addition, the state seeks to introduce certain usability standards and resources that will assist Project Managers and Development Teams. These include usability best practices that will help create sites that users can successfully navigate, complete on-line transactions and fulfill complex government processes all on-line.

It is critical that these design standards apply to all on line services, whether sites are treated as static content, search and result queries or fully featured transactional sites delivering e-commerce capabilities.

This standard covers all sites delivered by the state to conduct official business, whether directed at general consumers or specific, targeted constituent needs of the state, such as quarterly reporting, filing or updating of required, legal, state information and databases.

These standards apply to fonts, colors, graphics, navigation blueprint, and the location and position of required elements within the page layout. It also includes the state standard for information architecture, policies links and placement, copyrights and other key elements of the Michigan.gov brand, including usability and site performance. Virtually all of the presentation layer that is exposed through the user interface is subject to the requirements set forth in these standards.

## **Policies that affect all State of Michigan web sites**

There are a number of policy elements that are included in the Michigan.gov brand. These are standard and required across all page displays. They are displayed within the sub header and footer and link to existing pages published on the Michigan.gov portal.

The Department of Information Technology may update the policy language from time to time to insure that the state follows new state or federal laws, or so that changes in the present law are easily and quickly accommodated.

By requiring applications to link to these existing published policies, the state can manage and maintain the language from a central location, relieving specific sites from updating their pages individually. It also presents uniform conditions to be met by all applications, regardless of their final host URL or location within the State of Michigan infrastructure.

## **Compliance with Policy Language**

Applications are required to utilize links in the footer that point to existing URL's hosted by Michigan.gov. By doing so however, the application or on-line service carries with it the implication of conformity to these stated policies.

By linking to these policies, applications are subject to compliance. Applications that deviate from these standards should either be modified to correct the discrepancies or reasons submitted to e-Michigan Web Development explaining why any deviation should be allowed.

It is critical that agencies, as early in the design process as possible, consider the implications of the policies they are required to link to, specifically:

### **Privacy:**

- Form transactions that require personally identifiable information such as name, address, email or phone number
- Critical identification such as social security number, drivers license number
- Credit card number, banking ID or account numbers, Date of Birth
- Monitoring of web access based on an individual users
- Collection and storage of email addresses for contact at a later time

### **Accessibility:**

- Use of text equivalents, alternate text, drop down menus, java scripts and pop-up windows
- Compliance with the W3C Level A Priority 1 Checklist
- Multimedia equivalents
- Relative text sizing
- Color contrast of text and background cell colors

Continued next page

**Security:**

- Disclosure of personally identifiable information
- Unauthorized access to state data – penalty of law
- Hacking or attempts to maliciously alter data or systems
- Insure integrity of data transmissions between e-government applications

**Linking:**

- Suitability of information linked to from your site
- Opening new windows when leaving state sites
- Policies for advertising and exposure to potentially offensive material

**Special Note about Security, Privacy and Anonymous Access**

The state is a public institution and therefore is governed by and complies with the Freedom of Information Act (FOIA). As such, we are required by law to allow public access to information. Although the state has policies and procedures in place to accommodate FOIA, web sites and applications in particular must address the public need for anonymous access to information.

Applications and web sites must allow users to have minimum access to home page information without the need for special browser levels above MS5.X and NS 5.x, security, SSL encryption or user identification (by setting cookies etc.).

Welcome screens should include basic information about the intended audience, along with the proper banner header identification, sub header utility links and footer policies. This basic information should guide users to information that will help them answer questions about the purpose of the on-line service and where to go for more information and to obtain the proper security clearance needed to gain full access.

This allows the State of Michigan to comply with anonymous access rules while protecting private information.

Requirements higher security on the part of the application (to submit personally identifiable information such as Name, Address, Credit Card Number, Social Security Number, Date of Birth, Drivers License Numbers, Federal ID Numbers etc.) must be considered a deviation from the stated anonymous access policy.

Such applications are therefore required to provide a more detailed review and posting of the policy information within the web site itself to explain to users how their information will be kept private and secure.

Users should be informed that access to encrypted information beyond the home page will require them to either have the necessary security credentials or to obtain them directly through the site using on-line self-registration, e-mail or US mail correspondence.

Answers to policy questions can be obtained by contacting the e-Michigan Web Development office at (517) 241-5780.

## **Required Policy Links Location**

### **Policy Footer Links**

All State of Michigan Policy links and combined Sub Header Utility links must appear at the bottom (footer) of all pages used in an application. This area appears centered directly under the main body content area of the application in three (3) lines of text.

This provides users with easy access to all utility Sub Header links even after scrolling to the bottom of a page. It also provides the state with a typical uniform location for posting policy links of this type.

The Michigan.gov Home, State Web Sites and all Policy links should always point to the originating Michigan.gov URL to maintain absolute version control of official State of Michigan on-line service policies. These policies (source code) should never be copied, altered or placed directly into the originating application.

Additionally, links that are supported the applications that appear in the Sub Header should be included in this array. Some optional links might be:

- Site Map
- FAQ
- Login

- The following illustration and HTML serves as an example of the type of links structure and appearance layout that should be observed on all footers.

Footer Links should appear as follows:

The following HTML may be used to properly place footer link code into an application. The link URL's for policies that point to the Michigan.gov portal are correct.

The links for application contact, home page or any other optional link must be modified for the specific application by the Development Team. The code also contains the proper relative font tags, sizing and alignment features.

## REQUIRED Footer Links – Line One (1)

Link Name	Link URL points to:
Michigan.gov Home	<b>REQUIRED:</b> <a href="http://www.michigan.gov/">http://www.michigan.gov/</a>
<ApplicationName> Home  EXAMPLE: <a href="#">MDA Home</a>	<b>REQUIRED:</b> Home page URL – this link allows the user to return to the opening page of the site no matter how far into the site they have navigated. It appears fixed in the sub header for this reason.
Contact <ApplicationName>  EXAMPLE: <a href="#">Contact MDA</a>	<b>REQUIRED:</b> Points to the contact information page within the application. This page should contain information that would assist users in calling, faxing or emailing with questions or problems with the application process, on-line service or site problems. Contacts may also point to pages on other sites, such as the parent agency Contact page.
State Web Sites  EXAMPLE: <a href="#">State Web Sites</a>	<b>REQUIRED:</b>  <a href="http://www.michigan.gov/emi/1,1303,7-102---A,00.html">http://www.michigan.gov/emi/1,1303,7-102---A,00.html</a>  This link provides access to all state sites currently supported by the Michigan.gov portal environment, including all Boards and Commissions. This is part of the state’s “No Wrong Door” design policy that promotes cross-linking and allows users to gain access directly to agency sites by name.
Other utility links <b>such as</b> FAQ, Site Map etc.  <b>NOTE:</b> These are suggested links. If no FAQ or Sitemap exists for the application, then none should be listed. However, any utility link that is valid should go in this area.	<b>OPTIONAL:</b> Points to their respective pages within the application. FAQ’s may also point to FAQ engines on other sites, such as the parent agency FAQ pages. The same follows for Site Map.

**REQUIRED Footer Links – Line Two (2)**

Link Name	Link URL
Privacy Policy	<a href="http://www.michigan.gov/emi/1,1303,7-102---PP,00.html">http://www.michigan.gov/emi/1,1303,7-102---PP,00.html</a>
Link Policy	<a href="http://www.michigan.gov/emi/1,1303,7-102---LP,00.html">http://www.michigan.gov/emi/1,1303,7-102---LP,00.html</a>
Accessibility Policy	<a href="http://www.michigan.gov/emi/1,1303,7-102---AP,00.html">http://www.michigan.gov/emi/1,1303,7-102---AP,00.html</a>
Security Policy	<a href="http://www.michigan.gov/emi/1,1303,7-102---SP,00.html">http://www.michigan.gov/emi/1,1303,7-102---SP,00.html</a>

**REQUIRED Footer Text Only – Line Three (3)**

## Accessibility and ADA Compliance

### Michigan ADA Compliance rules and Section 508

The State of Michigan has adopted compliance with Federal laws and policies relating to Section 508 of the Rehabilitation Act: Electronic and Information Technology Accessibility Standards.

Section 508 of the Rehabilitation Act requires access to electronic and information technology procured by Federal agencies. The Access Board developed accessibility standards for the various technologies covered by the law. These standards have been folded into the Federal government's procurement regulations.

### The Rehabilitation Act Amendments (Section 508)

On August 7, 1998, the President signed into law the Rehabilitation Act Amendments of 1998, which cover access to federally funded programs and services. The law strengthens Section 508 of the Rehabilitation Act and requires access to electronic and information technology provided by the Federal government.

The law applies to all Federal agencies when they develop, procure, maintain, or use electronic and information technology. Federal agencies must ensure that this technology is accessible to employees and members of the public with disabilities to the extent it does not pose an "undue burden."

Section 508 speaks to various means for disseminating information, including computers, software, and electronic office equipment. It applies to, but is not solely focused on, Federal pages on the Internet or the World Wide Web. It does not apply to web pages of private industry.

In addition, the state conforms to the World Wide Web Consortium (W3C) regarding ADA accessibility and compliance. Consulting this body for the latest in news and updates regarding accessibility is highly recommended.

<http://www.w3.org/WAI>

Officially, the State of Michigan requires all web site content and applications to meet **Conformance Level "A" Priority 1 checkpoints**.

The State of Michigan uses the **Web Content Accessibility Guidelines 1.0** for all references to accessibility. In addition, the **Checklist of Checkpoints for Web Content Accessibility Guidelines 1.0** can assist developers in verifying that they have complied with all Priority 1 State of Michigan intentions with regard to this law.

<http://www.w3.org/TR/WCAG10/full-checklist.html>

Although the requirements may seem vague to many developers, many sites assist in meeting these requirements. Issues ranging from the simple to the complex:

- Alternate tags on images
- Use of JavaScript in applications
- Creating accessible PDF documents

By following the guidelines and reading the suggested materials, many of these issues can be solved. In addition – many of these sites offer additional guidance and links to solve many of the most difficult issues.

### **Vignette Sites and ADA**

It is important to note that the Vignette Content Management Application (CMA) and the corresponding Content Display Application (CDA) have built-in ADA compliance features that virtually eliminate ADA compliance errors. By default, the display system was designed to comply with Level A Priority 1 Checkpoints. This allows content authors, editors and publishers to create content without the need for constant checking and compliance verification. Vignette Site Administrators should, however, be well versed in the ADA standards and understand how to spot potential content that conflicts with the standard.

### **Automated ADA Compliance Tools**

Many sites offer automated checking to test sites either already published or currently under development. It is important to remember that automated sites do not result in a blanket solution to compliance. The following text was taken from the W3C site on accessibility:

Please note: There is yet no tool that can perform a completely automatic assessment on the checkpoints in the guidelines, and fully automatic testing may remain difficult or impossible. For instance, some checkpoints rely on an interpretation of what "important" information is, or whether the text equivalent for a non-text element is accurate.

It is also possible for automated accessibility checkers to register "false negatives" or "false positives" due to the type of mark-up on a page. For these reasons, the logos on this page are used to indicate only a claim of conformance made by the author of a page, not a machine-validated conformance.

Copyright © [World Wide Web Consortium](http://www.w3.org/) – www.w3.org/

## Recommended ADA Compliance Testing Tools

The following accessibility sites are highly recommended for ADA testing and analysis. Development Teams should use the resources of these sites to evaluate and analyze their designs. To achieve the best results, run the test through several times.

<p><a href="#">Bobby</a> Bobby is a validation tool that will check your HTML code and suggests changes in order for your web site to conform to universal accessibility standards.</p> <p><a href="http://www.cast.org/bobby/">http://www.cast.org/bobby/</a></p>	<p><a href="#">Wave</a> Part of the Pennsylvania's Initiative on Assistive Technology, where you can use this page to test your site for persons with disabilities. Note: if you have used tables to lay out your page, the results show the order that the cells would be read in a screen reader.</p> <p><a href="http://www.temple.edu/instituteondisabilities/piat/wave/edit.html">http://www.temple.edu/instituteondisabilities/piat/wave/edit.html</a></p>
<p><a href="#">LynxView</a> If you do not have lynx (a non-graphical browser) on your server, to test your pages, use this site to produce a document simulating how your page would be viewed in Lynx.</p> <p><a href="http://www.delorie.com/web/lynxview.html">http://www.delorie.com/web/lynxview.html</a></p>	<p><a href="#">How to Create Accessible Adobe PDF Files Booklet</a> A step-by-step guide that covers the basics for creating and optimizing Adobe Portable Document Format (PDF) files so that they can be made accessible to users with disabilities such as blindness or low vision.</p> <p><a href="http://www.adobe.com/products/acrobat/access_booklet.html">http://www.adobe.com/products/acrobat/access_booklet.html</a></p>
<p><a href="#">Vischeck</a> Vischeck can show you what your image looks like to people who are color blind, people with glaucoma or macular degeneration, elders and children. Specifically, you can submit a URL and it produces a copy of your site, as it would appear to someone with red/green color blindness.</p> <p><a href="http://www.vischeck.com/">http://www.vischeck.com/</a></p>	<p><a href="#">Effective Color Contrast</a> Designing for People with Partial Sight and Color Deficiencies by <a href="#">Aries Ardit, PhD</a></p> <p>This web page contains basic guidelines for making effective color choices that work for nearly everyone. To understand them best, you need to understand the three perceptual attributes of color; hue, lightness and saturation, in the particular way that vision scientists use them.</p> <p><a href="http://www.lighthouse.org/color_contrast.htm">http://www.lighthouse.org/color_contrast.htm</a></p>
<p><a href="#">Lift</a> This site allows you to test a page for a variety of usability features, not just things related to disabilities. For example, looks for keywords or use of nonstandard code that could cause problems in various browsers.</p> <p><a href="http://www.usablenet.com/">http://www.usablenet.com/</a></p>	<p><a href="#">IBM</a> IBM Accessibility Center. This site contains a wealth of ADA accessibility information, testing tools and documentation, especially when creating applications, e-commerce and transactional web sites using complex coding and methodologies.</p> <p><a href="http://www-3.ibm.com/able/accessweb.html">http://www-3.ibm.com/able/accessweb.html</a></p>

## Relative Font Sizing in HTML

For the purposes of ADA compliance, all font tags should follow relative rather than absolute font sizing when coding displays or Cascading Style Sheets (CSS). Depending on the font color associated with either an existing color style based on the parent agency site or a new style for a cross agency site, font tags should be constructed as follows to allow for ADA compliance and browser settings.

The display of all server side text should use the default font face tag:

```
<font face='arial, helvetica, sans-serif'>
```

Font styles should default to Arial Regular, Bold or Italic, Helvetica Bold, Regular and Italic, sans serif in sizes ranging from the smallest (-2) to the largest (+2).

Resulting display font tags are demonstrated below. Depending on the font color associated with either an existing color style based on the parent agency site or a new style for a cross agency site, font tags should be constructed as follows to allow for compliance and browser settings:

**Michigan:"Greatness through Challenge"**

```
<font face='arial, helvetica, sans-serif' color='#003366' size='-2'>
```

**Michigan:"Greatness through Challenge"**

```
<font face='arial, helvetica, sans-serif' color='003366' size='-1'>
```

**Michigan:"Greatness through Challenge"**

```
<font face='arial, helvetica, sans-serif' color='003366' size='-1'><i>"Fast Lane to Future is Now Open"</i>
```

**Michigan:"Greatness through Challenge"**

```
<font style="font-weight: bold" face='arial, helvetica, sans-serif' color='#003366' size='+1' style='font-weight:bold'>
```

**Michigan:"Greatness through Challenge"**

```
<font face='arial, helvetica, sans-serif' color='#003366' size='+1' style='font-weight:bold'>
```

**Michigan:"Greatness through Challenge"**

```
<font face='arial, helvetica, sans-serif' color='#003366' size='+2' style='font-weight:bold'>
```

## Font styles

Font styles such as but not limited to: *comic sans*, *calligraphy*, *scripts*, *brushes*, **BLOCK**, or **over-styled** typefaces should be avoided and are not business appropriate for State of Michigan on-line services.

## Font tags, style and color

Font tags embedded within the code or other programming languages may treat font tags differently, but at the HTML display level the text should follow the general specifications listed here.

Font colors should adopt the look and feel of a particular parent agency site, but attention should be given to provide optimum contrast on a background cell color. Body text default colors, unless otherwise specified within the application style or server side includes, should be black (#000000) text on a white background.

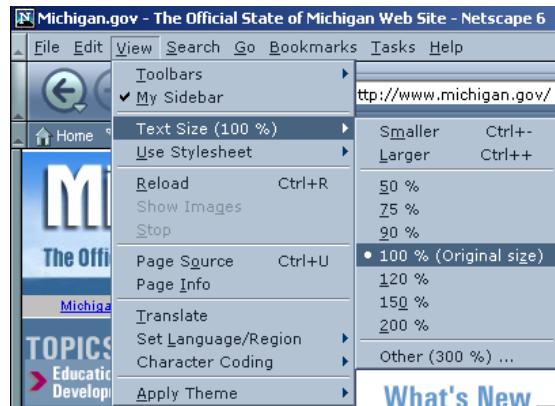

Relative font sizing allows users to manually adjust the size of the text display, larger or smaller, using their personal browser settings. As the user population ages and to accommodate those with vision disabilities, the sizing feature allows users to “customize” the appearance of the text within their own screen. Absolute sizes limit the ability of users to take advantage of this feature.

Below are examples of font size selections capabilities as seen in both IE and NS browser platforms – use of relative font sizes embedded within the HTML satisfies one of the state’s ADA requirements.

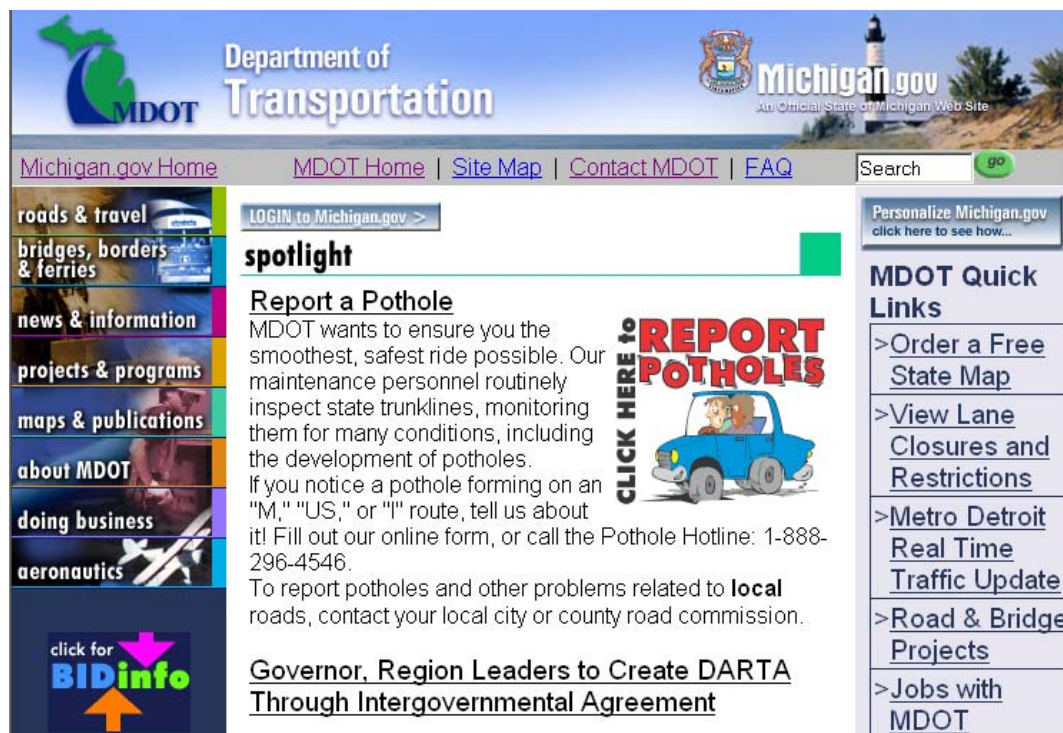

Microsoft’s Internet Explorer v 6.0

Netscape’s Navigator V 6.0

This ADA feature is designed to assist users who need to enlarge their text to make it easier to read by using their browser’s font sizing function. This site is set to <largest>.

## Color contrast - Color Blindness

For the purposes of ADA compliance, contrast for all text in the main body areas should default to black text on a white background. Black text on a white background yields the highest contrast and makes for easy transition from screen to screen. Colored text for body content can be used to emphasize important instructions or information that readers should pay attention to, however careful attention should be paid to how these colors interact with each other.

“Color blind” users can have difficulty distinguishing between certain colors. Merely changing the color of text within a sentence may make text invisible to users. A better solution is to add important text cues.

For example: look at the following screen captures. Using testing software, the site was run through a system that simulates a common form of color blindness (Deuteranope - a form of red/green color deficit). Notice how removal of most of the red impacts the color contrast of not only the images, but the supporting text as well.

All applications that use their own text colors should strive to utilize colors that offer the highest contrast with text. Avoid the use of color combinations that make it difficult to distinguish text from the cell color at-a-glance. Watch for colored text on backgrounds that have near to or the same value as the cell color.

“Normal” viewing

With Color Blind Filter ON

Note the overall reduced color contrast between colors in the navigation area as well as the red text that describes important information.

Effective Color Contrast - Designing for People with Partial Sight and Color Deficiencies: [http://www.lighthouse.org/color\\_contrast.htm](http://www.lighthouse.org/color_contrast.htm)

Don't assume that the lightness you perceive will be the same as the lightness perceived by people with color deficits. You can generally assume that they will see less contrast between colors than you will. If you lighten the light colors and darken the dark colors in your design, you will increase the visual accessibility.

©1995-1997 The Lighthouse Inc.

## Testing your application for ADA compliance

Many sites offer or feature descriptions on how to apply ADA compliance rules to building applications, however fewer exist to help developers actually test sites they have built. The following URL contains links that are extremely useful to assisting developers in testing for a variety of compliance factors. This includes simulations for color blindness, text only readers and much more. The link here is suggested. Developers are encouraged to seek out testing sites that offer similar alternatives.

<http://uaweb.arizona.edu/resources/validation.shtml>

## JAWS and Linx Readers

The most common form of ADA compliance is the use of text readers that allow individuals to “listen” to the web sites they visit. Synthesized voice technology, now common with almost all operating systems on personal computers, allow users to access sites through their web browser and have the text read to them through audio speakers on the same system.

The process is tedious for users who are accustomed to viewing their information. Testing your application for these important features means running your application through this process.

Sites that appear well designed and thought out actually become very cumbersome when this technology is applied. There are two recommended methods for testing applications using this technology. The most popular screen reader today is Freedom Scientific's JAWS® for Windows ([www.freedomscientific.com](http://www.freedomscientific.com)).

A free copy of this software can be downloaded from the site. The full version can also be purchased. Using the free version will allow developers and testers to see how their site performs using this tool. Using the TAB key, users can jump from one link to another, and with the ENTER key, follow a link. Poor tab order and other table structure problems are often revealed through this process.

There is no absolute ADA “PASS/FAIL”. Rather, careful analysis must be performed to evaluate the results of each successive test and then make the corrective action to modify the code to reach full compliance.

Another tool often used in conjunction with screen reading technology is Lynx. This software strips out all graphics that normally appear and simplifies the reading technology job. Many wireless devices also access the Internet using this type of technology. If you do not have Lynx (a non-graphical browser) on your server, developers can access the following site to test your pages to produce a document simulating how your page would be viewed in Lynx.

[www.delorie.com/web/lynxview.html](http://www.delorie.com/web/lynxview.html)

Below is an example of the Department of Environmental Quality's ([www.michigan.gov/deq](http://www.michigan.gov/deq)) site filtered through Lynx technology.

```

Navigating the DEQ Website

The Department of Environmental Quality website represents the latest
enhancement to the award-winning Michigan.gov web portal. This site
includes many important features designed to increase citizens' access
to Michigan's services. These features include a common look-and-feel,
search engine, Quick Links and links to Michigan's privacy and
security policies.

*
Environmental Contacts
*
Environmental Grants & Loans
*
Environmental Laws & Rules
```

Since all sites are unique, it will be incumbent on developers to verify that they have tested their site using this tool. Making a site flow smoothly using these tools will increase the accessibility of all state of Michigan applications and promote access for all citizens.

# Security Policy

## New DIT Security Requirements and Procedures

Since the first publication of the Look and Feel Standards in March 2002, the Department of Information Technology was organized and a permanent standing committee of the Office of Security and Disaster Recovery (OSDR) was created. This office is responsible for all data security, recovery policies and methodologies for the State of Michigan. It is critical that web sites and applications comply with security rules and standards monitored and enforced by this body.

Sites that require basic and elevated levels of security should involve the OSDR in the design process as early as possible, so that network security and privacy issues can be addressed correctly and in a timely manner.

OSDR Contact Information  
Office of Security and Disaster Recovery  
Hollister Building – 4th Floor  
Lansing, MI 48909  
(517) 241-4090

The Michigan.gov web site contains the most recent and approved security policy now in force with the State of Michigan, and a link to this policy is required to appear on all application and web site footers.

The policy reads in part:

These measures are designed and intended to prevent corruption of data, block unknown or unauthorized access to our systems and information, ensure the integrity of information that is transmitted between users of e-government applications and the State, and to provide reasonable protection of private information that is in our possession.

More important is the language contained within the Security policy. It explicitly regulates the type of access citizens are guaranteed to obtain and the expectations they have when transacting or conducting official State of Michigan business on line through the Internet.

Unauthorized access or attempts to alter or hack systems is monitored by OSDR and Michigan Law contains penalties for internal intrusion or destruction of data. Additionally, citizen information must be protected and safeguarded from both internal and external threats.

## Using High Level Security and 128 bit Encryption

For security and 128 bit encryption requirements, some applications can and should be accessed only with certain browser versions. The state allows for these exceptions provided:

Prior to accessing secured or encrypted pages, introductory home page(s) of the application must be viewable in IE 5.X and Netscape 5.X to accommodate the greatest number of users at the state's minimum standard.

In the opening page, clearly identify the browser version requirements to transact secure state business and provide the correct privacy and support information detailing the need for specific browser versions.

Provide and maintain links to specific commercial software sites that allow the download and installation of specific browser versions needed to maintain application security.

## **Privacy Policy**

The state has a privacy policy that remains in place for all web sites and applications. It refers mainly to issues regarding the collection and use of private information gathered from users visiting official State of Michigan sites. Be sure to read, review and understand the stated policy. Development Teams should consider the following general criteria when designing sites:

- Information Collected Automatically
- Information Voluntarily Submitted
- Cookies
- Information Sharing and Disclosure

All carry intended expectations and should be thoroughly examined to be sure that a user's information is properly obtained and if voluntarily submitted, properly safeguarded against unlawful use or distribution to third parties. It is critical that the State of Michigan maintain this expected trust between citizen, business and government.

## **Linking Policy**

### **Linking to non-Michigan sites**

All web sites and applications may link to third party sites if information contained in those sites is relevant to support the user in conducting and completing transactions or provides additional content valuable to the user. Many sites are part of official state contracted business providing insurance or licensing services to the state, or have been specifically engaged by the state to provide on-line support services or commodities.

Critical to this policy, however, is that sites not under the explicit control of the State of Michigan are required to open in a new and separate browser window.

Additionally, sites that are linked to from an originating State of Michigan site or application must be periodically reviewed for suitability and content. Advertising and other material posted by a third party site are not under the control of the State of Michigan, but may be perceived as such by end users.

Care and attention should be given whenever third party sites are linked to from official State of Michigan sites. The State of Michigan makes no commercial endorsements nor participates in advertising or promoting commercial sites for the benefit of the third party site owners. The inclusion of vendor logos and links to commercial sites with the intent to promote sales is not supported.

As a rule, three conditions support the need to link to outside sites:

1. Links to Other Governmental Units & Educational Institutions
2. Links to Private Organizations (if these organizations offer services that complement the information or services offered by Michigan)
3. Links to Non-Profit Organizations

## **Logos and branding of 3<sup>rd</sup> party applications**

There are circumstances where an agency has purchased Commercial Off-the-Shelf (COTS) software that is configured by the vendor as an out-of-box installation, and therefore carries with it the vendor's proprietary branding and information explicit to that vendor. Under these circumstances, altering or removing the vendor brand would be cost prohibitive, and so those applications may utilize branding other than the State of Michigan's.

Where possible, even under these circumstances, vendors may have areas that are configurable to a specific customer brand or logo, and minor code changes can be made to accommodate the customer brand. If these areas exist, the State of Michigan branding standards would apply, to the extent possible, most importantly being the banner header identifying the agency.

If spaces allow a specific area to be filled, then please contact the e-Michigan Web Development office to obtain specially configured branding elements.

Agencies that contract with outside software companies and vendors to build applications or web sites for the State of Michigan are prohibited from including the vendor's logo or brand image on the site, or from providing links to the vendor's commercial web site.

Sites that wish to link to any official State of Michigan site may do so but must observe the policy restrictions. Please read and observe the policy language for compliance.

## **Michigan.gov Domain Name URLs**

The Department of information Technology has ownership of the Michigan.gov domain and makes it available to agencies that are launching applications, even if not part of the Michigan.gov technology platform.

Many applications hosted on state servers or outside systems will utilize their own domain name to address the application URL such as <www.state.mi.us/agency/appName>. The Michigan.gov standard also puts in place redirected URLs from the Michigan.gov domain.

These URLs are intended to make it easier for applications to be advertised and marketed to constituents, through point of sale, radio, print, and TV advertising or official state government press releases.

At the State of Michigan, users are typically notified of the improved on-line service through a press release through the Governor's Office, the agency Public Information Officer, or through an event publication or direct mailing. In order to make the URL as memorable as possible, the Michigan.gov domain is used as a "marketing redirect" to the final application URL.

For instance, URLs can be phrased to include names or familiar acronyms that direct users to the site more easily. It's also a free service of the e-Michigan Web Development Team and can be put into production within 1-3 days. Contact the e-Michigan Web Development office to receive more information at (517) 241-5780.

#### EXAMPLES:

Michigan.gov redirect URL	Final destination URL
<a href="http://www.michigan.gov/scm">www.michigan.gov/scm</a>	<a href="http://meis.cepi.state.mi.us/scm/">http://meis.cepi.state.mi.us/scm/</a>
<a href="http://www.michigan.gov/bccpermits">www.michigan.gov/bccpermits</a>	<a href="http://www.accela.com/michigan">http://www.accela.com/michigan</a>
<a href="http://www.michigan.gov/magic">www.michigan.gov/magic</a>	<a href="http://magic.state.mi.us">http://magic.state.mi.us</a>
<a href="http://www.michigan.gov/metrodetroittraffic">www.michigan.gov/metrodetroittraffic</a>	<a href="http://metrocommute.com/detroitpopup.html">http://metrocommute.com/detroitpopup.html</a>

As can be seen from these examples, due to the nature of web publishing and hosting technologies and environments, the final destination URL can often times be confusing and technical.

Users may learn of a site by word of mouth or recall a recent announcement. URLs are often hard to understand or are easily mistyped. This adds to the frustration of users and makes finding a single site within the 100's of state sites that much more difficult.

## Copyright

### Copyrights of 3rd party applications

All content displayed or information transacted through the use of electronic means by way of a web site, application or e-commerce site are the property of and copyright protected by the State of Michigan under the federal laws and U.S. Copyright Law and Related Laws Contained in the United States Code.

Refer to the following web site for detailed information regarding Copyright:

<http://www.copyright.gov/>

The State of Michigan policy on copyright protection insures that information is not captured and reused by third parties that portray themselves as an official State of Michigan agent. The information contained within any official State of Michigan web site is published for the users own personal use.

## Information Architecture of the Michigan.gov Look and Feel standard

All site designs must incorporate these elements for a common, consistent presentation layer

### Overall Application Screen Resolution

The 800 x 600 pixel monitor resolution (High Color 16bit minimum) is the state's application build standard. All official State of Michigan Web Sites and Applications must conform to this minimum display standard.

As a minimum operating standard, applications must be able to perform all functions, display necessary attributes required to conduct official state business and display all general content within this resolution framework. This includes all input and output data displayed as either tables, rows and columns, functional input fields, security authentication, radio buttons and select boxes, search results etc. In short, the application must be fully functional in this screen mode setting, along with vertical scroll bars.

### Vertical and Horizontal Scroll Bars

Typically, scroll bars are utilized to view any part of the screen that falls outside a screen dimension. That is, content or other information that falls vertically "below the fold".

"Below the Fold" refers to that area at the bottom of the browser screen that limits what can be displayed to the user. This is analogous to the print newspaper publishing term that describes how a newspaper is folded in half for point of sale.

Good newspaper editors know that if a story is to grab the attention of readers, it needs to be "above the fold". Everything below the fold is just more information. Combined with large headline type, the story is easily viewed by a customer walking past a newsstand or inside a newspaper vending machine.

The same idiom holds true for the Internet as a communication channel, so the term has been applied to the electronic publishing industry as well.

Web designers should manage to include as much of the site's information "Above the Fold" as possible. This offers the user ease of access to critical information without scrolling.

Applications should avoid horizontal scroll bars appearing at this minimum resolution, or any higher resolution. Horizontal scrolling causes many usability conflicts and is considered a poor application of information architecture. Users will often miss details or valuable information if displayed off the screen and will constantly be required to move the screen to see all of the information. The net result is users tend to avoid sites that require too much scrolling.

### **Fixed vs. liquid design**

Applications should not be designed for operation that requires screen resolutions higher than 800 x 600. Fixed table spaces, rather than 100% settings, are recommended to accommodate the majority of users that access web site content or conduct business with official State of Michigan sites and applications.

Although this issue is often debated among professional IT developers, liquid page displays are not recommended ("liquid" refers to page content that is flexible and adjusts its width depending on the browser window size). Unlike IT professionals or web developers, the general user audience tends to keep the standard default settings that came with their PC, which for many years has been at 800x600. If applications are designed to follow a liquid format, adjustments to table spaces and others usability factors must be considered. Users that choose to modify their personal monitor settings should simply see more of a given web site or application screen.

This is changing and recent end user surveys indicate that the trend is for home PCs to match the already higher resolutions of work PCs. More PCs are shipped with higher graphics capabilities and the market is saturated with better display technology. For instance, the Optimal Preset Resolution shipped with the market leader of today's home office PC is 1024x768.

This does not eliminate the fact however that millions of PCs with older monitors are still in use. Therefore, applications should not be designed to operate exclusively at the higher settings.

Some recent data suggests the majority of users accessing the World Wide Web continue to use the lower resolution settings, and this requires that developers maintain that awareness when designing display screens or user interface functions. However, recent increases in monitor performance and video graphic cards shipped with the most popular PC's continue to affect the typical viewer experience. Developers have more flexibility in creating applications where more data is visible on a single screen without scrolling. <sup>1</sup>

Screen Resolution	Global Percentage (%)
1152 x 864	2.32
1280 x 1024	2.88
1024 x 768	32.72
800 x 600	52.47
640 x 480	5.71

### Screen Shots of heavily used sites

The best way to illustrate sites that accommodate 800x600 and 1024x768 screen resolutions is to view examples of popular web sites visited daily by millions of consumers. Although they are e-commerce sites and are heavily consumer oriented, they represent the most common denominator in terms of usability and browser capabilities.

The corporations that pay to build and maintain these sites have invested large amounts of capital and code development to provide the best user experience possible, and using them as examples makes a very compelling case to build sites that are not liquid. As these examples illustrate, the most popular sites maintain a relatively fixed display environment.

Screen capture – Amazon.com at 800x600 – Liquid but maintains a center body area

This screenshot shows the Amazon.com homepage at 800x600 resolution. The layout is liquid, with a central body area. The top navigation bar includes the Amazon logo, a shopping cart icon, and links for 'VIEW CART', 'WISH LIST', 'YOUR ACCOUNT', and 'HELP'. Below this is a secondary navigation bar with categories like 'WELCOME', 'YOUR STORE', 'BOOKS', 'APPAREL & ACCESSORIES', 'ELECTRONICS', 'TOYS & GAMES', 'MUSIC', and 'SOFTWARE'. A 'Pre-order now!' button is visible next to the 'Harry Potter Deluxe Edition' banner. The main banner area features a 'Father's Day Is June 15' promotion with a 'Shop digital cameras' button. The left sidebar contains a 'SEARCH' section with a search bar and a 'GO!' button, a 'WEB SEARCH' section powered by Google, and a 'BROWSE' section with 'Featured Stores'. The central body area has a 'Father's Day Savings' section with a 'Shop now' button and a 'Save up to 50% in our Spiegel Summer Sale' section. The right sidebar features an 'Exclusively at Amazon.com' section for a Fossil watch and a 'WHAT'S NEW' section with a 'Sign in' button.

[More Info >>](#)

The screenshot shows the Walmart.com homepage at 800x600 resolution. The header features the Walmart logo with the tagline "ALWAYS LOW PRICES. Always." and navigation links for "Your Account", "Cart & Checkout", "Help", and "International Customers". Below the header is a horizontal menu with categories: Electronics, Photo Center, Movies, Books, Toys, Video Games, Home, Garden, Sports & Fitness, Baby, Flowers & Gifts, Jewelry & Watches, and a "See More" link. A search bar is located below the menu, with a dropdown menu set to "Entire Site" and a "Find" button. A yellow banner below the search bar reads "NEW! Register for Great Gifts Online. Start a Gift Registry." The main content area is divided into several sections. On the left is a "Welcome" sidebar with links to "Home" (Furniture & Decor, Appliances, Bed & Bath), "Electronics" (Computers, TV, Audio & Video, DVD Players), "Internet Access" (\$9.94/mo), "Photo Center" (Digital Cameras, Camcorders, My Photos), "Movies" (13,000 Movies! with links to DVD and VHS), and "Baby". The central section is a large "Now Playing: DVD Rentals!" advertisement. It features a red banner with the text "Unlimited Rentals From \$15.54 per Month" and lists benefits: "No late fees", "Free shipping", and "Over 13,000 movies". It also promotes a "Start Your FREE 30-Day Trial Today" and "Express Shipping is Only \$1.87". The ad includes images of DVD covers for "The Sopranos" and "Harry Potter". To the right of the DVD rental ad is a "New customer? Click here to get started." link. Below the DVD rental ad is a "Gifts For Dad" section. It includes a "DVD Rental Gift Subscriptions" offer (unlimited movie rentals for up to 3 months), "Online Shopping Cards" (email a quick and easy gift to Dad), and "Jewelry & Watches" (Just \$2.97 for Express shipping!).

The screenshot shows the Walmart.com homepage at 1024x768 resolution. The layout is similar to the 800x600 version but with more content visible. The header and navigation menu are identical. The "Welcome" sidebar on the left is expanded, showing additional categories: "Music" (80,000 CDs!), "Books" (500,000 Titles!), "Video Games", "Toys" (Swing Sets, Outdoor Play), and "Baby". The central "Now Playing: DVD Rentals!" advertisement is the same as in the 800x600 version. Below the DVD rental ad, there is a section titled "Express Shipping is Only \$1.87" which features images of "Digital Cameras" and "Portable DVDs". Below this, there is a "Plug Into Savings" section with images of "Notebook Computers" and "LCD Flat Panel". To the right of the DVD rental ad, the "Gifts For Dad" section is expanded to include a "Featured Item" section. The featured item is a "Fire & Ice Grill" described as a "2-in-1 grill/cooler" that is "on Rollback!".

## Overall Application Build Area

**These elements must appear on all pages**

### 1. Banner Header

- a. Artwork supplied by e-Michigan Web Development

### 2. Sub Header

- a. Directly under banner header and includes all utility links and required links

### 3. Primary Application Display area

- a. Includes primary user interface and functionality. May utilize Body Only, Left Navigation Only or Left and Right navigation

### 4. Policy Footer

- a. Includes all required policy links, support sub header links and copyright information

## Browser Compatibility

### Microsoft Internet Explorer (IE) and Netscape (NS) Browser compatibility

Another key component to the Michigan.gov brand is browser compatibility. Applications must display and function correctly in both IE (Microsoft Internet Explorer) 5.X and NS (NetScape) 5.X minimum – See Excel spreadsheet for browser Statistics

The state receives high-volume traffic from a variety of ISP's (Internet Service Providers) as well as a full range of browser versions, the bulk of which use IE.

Development Teams must consider the latest browser versions as well as pre-existing versions when developing sites, including Windows, Macintosh, AOL and WebTV users.

Below is a listing of top browser versions that access the Michigan.gov domain in order of highest to lowest, based on statistics gathered in June 2003. Also included is a snapshot of the top 10 sub-domains that access the Michigan.gov portal taken in May 2003.

Internet Explorer	Top Ten Sub-Domains for May 2003
	aol.com
	comcast.net
	michigan_state_government.arin
	chartermi.net
	ameritech.net
	level3.net
	attbi.com
	uu.net
	voyager.net
AOL	wideopenwest.com
Netscape	
WebTV	
Robots	

## Michigan.gov Brand

### Banner Header Types

The following pages are designed to define the banner header area for the Michigan.gov brand, a key element to all on-line service sites representing the State of Michigan.

The goal of the banner header area is to present the user an official State of Michigan unified, brand image that carries across to all agency home sites. In addition, the same brand image is duplicated at the agency application level, even when URL's change, so that the user experience is as seamless as possible.

Designed into the banner header area is the ability to accommodate the unique logo or symbol of the parent agency as well as the agency name. For applications that serve several agency user groups at the same time, a more "generic" logo has been developed to accommodate the service as a Michigan.gov product rather than a specific offering from a single agency or department.

This also affects applications built with the WebSphere Commerce Suite of tools and technology established by DIT. These include e-stores and other applications that utilize e-commerce systems to process payments and fees.

In all of these scenarios, the look and feel is treated as much as possible as a unified presentation of on-line services, offered by many different sources but with one goal in mind – fast and efficient on-line customer service.

The e-Michigan Web Development Division is responsible for the design and construction of these banner headers.

Please contact the e-Michigan Web Development Division to obtain the correct banner art and any other follow on requirements that involve the Michigan.gov Brand Image.

e-Michigan Web Development Division  
Romney Building – 9th Floor  
111 S. Capitol Avenue  
Lansing, Michigan 48913  
(517) 241-5780

## Standard Banner Header - 740x100 pixels

The banner header area contains the static image of the agency or cross agency logo, the agency, division or commission name, and the Michigan.gov brand elements featuring the blue-sky background, state coat-of-arms and Michigan lighthouse lakeshore image.

This image solution comprises the bulk of the Michigan.gov brand elements and has been implemented across all agencies and applications. This standard applies to all web display pages for both Internet, Intranet, Extranet or any other web delivery or on-line service in place or planned for the State of Michigan.

### Banner Header Hyper-linking

This area is specifically designated with the following dimensions: **475x100 pixels**. For all versions of the banner header, the region identified to the far left containing the agency or cross agency logo and agency name **will hyper-link** to one of the following:

Sites hosted within the Vignette Content Management Application (CMA) will link to the home page of the parent site (Example: [www.michigan.gov/agencyname](http://www.michigan.gov/agencyname)).

Sites or applications hosted outside the Vignette system will link to the specific application home page. These sites are typically hosted on agency internal servers, or the state's clustered server system, and in some cases, by third party contracts outside the states network. (Example: <https://treas-secure.treas.state.mi.us/eservice/start.swe>)

Sites such as these must contain a link in the sub-header back to the Vignette hosted parent agency. See also section on Sub-Header linking for complete details.

Sites that serve several agencies, or Cross-agency sites, will link only to home page of the cross-agency application.

### Far Right Banner Header Hyper-linking

This area is specifically designated with the following dimensions: **265x100 pixels**. This remaining area to the far right **will always hyper-link** to the Michigan.gov portal home page ([www.michigan.gov](http://www.michigan.gov)). This standard applies to all applications or sites hosted within the Vignette system, on agency internal servers, state clustered server systems or third-party external hosting arrangements.

## **Banner Header sizes**

In all cases, the full agency banner header (100 pixels) is to be used on sites or application home pages, welcome and login screens, and should appear on all subsequent pages of the site, regardless of navigational choices made by the users or display screens built within the application.

For Vignette hosted sites, the banner header appears automatically on all pages and remains consistent in size and display.

For applications hosted on agency servers outside the Vignette system the banner header should be a duplicate of the parent agency banner header.

For cross agency applications, the banner header should be consistent with the layout standards detailed in this document, which includes the generic “Michigan” logo and application title, and should appear on all pages within the application.

## **Banner Sizes**

In some cases, especially for sites hosted outside the Vignette system where the application display area needs to be maximized, two smaller versions of the banner header may be used.

These smaller sized versions allow Development Teams to maximize the amount of usable display window presented to users. The larger area allows inclusion of more objects, controls and display features and presents more information at the top most of the screen, while still maintaining the branding elements and links necessary to the application.

A recommended best practice for the use of smaller banner headers is to deploy them only after the user has moved beyond the introductory home page, welcome or login screen (which features a full-sized version) and is engaged in accessing critical portions of the application.

These banner headers available consist of equally sized and proportioned designs that are all equal in length but differ in (X) height dimensions. They are:

- 740x 100 pixels
- 740x70 pixels
- 740x50 pixels

Critical to these banners is the exact orientation of the design elements as they relate to agency or generic logo, application or agency name, placement and alignment of all Michigan.gov branding elements.

## Banner Header Sizing

The banner header has several display sizes (height only) depending on the available space in the application display area

Banner headers on home pages and introductory screens should utilize the full-size version (100 pixel height) whenever possible. Subsequent pages within the same application may utilize smaller versions of the same header design, available in 70 and 50 pixel high arrangements

All banner headers, regardless of height, are a standard 740 pixels wide.

All banner header art is produced exclusively by the e-Michigan Web Development Team. Contact the e-Michigan Web Development Team to receive final art. Banner header art must never be cropped or altered in any way.

100

70

50

Banners headers must include an image map link area for application home page and Michigan.gov portal.

Note the alignment and placement of the key elements of the banner components, and how they are clear and consistent even as the banner reduces in size.

These design details are maintained by the e-Michigan Web Development Team. Alteration of the banner header by other Development Teams or third-party groups is prohibited.

740x100 high

740x70 high

740x50 high

#### **Obtaining final artwork from e-Michigan Web Development**

Preserving the highest image quality, integrity and brand display and alignment is critical to the public's perception that they are using an official State of Michigan web site to conduct official state business. That includes viewing static content to applying for grants or obtaining criminal history searches.

Therefore, only authorized banner header art should be used on any application or web site produced by or for the State of Michigan. Artwork should never be "snagged" from other sites and reconfigured using photo editing software or any other electronic alteration, including cropping, re-optimization or sizing.

Contact the e-Michigan Web Development Division at (517) 241-5780.

## Branding Exceptions and Special cases

Occasionally, design formats or requirements demand branding solutions that accommodate critical dimensional needs of the application, and for third party commercial off the shelf software.

The Michigan.gov design standards are designed to accommodate Commercial Off-the-Shelf (COTS) web applications purchased from vendors (such as Seibel, Lawson, etc.) for use on State of Michigan sites.

Typically, COTS products allow minimal or even “no branding” elements other than the vendor's to be displayed inserted. Some are proprietary to a particular vendor's software product and carry the vendor logo or application name, making the effort to add Michigan.gov branding elements or navigation styles costly and unnecessary.

e-Michigan Web Development can accommodate some elements of the Michigan.gov brand and links even within proprietary applications. These are designed on a case-by-case basis. Please contact the e-Michigan Web Development Team for a more detailed analysis and potential solution.

The following illustration is an example of a pre-existing, packaged vendor site (CitiStreet) designed to accommodate specific branding from the State of Michigan.

## Sub Header

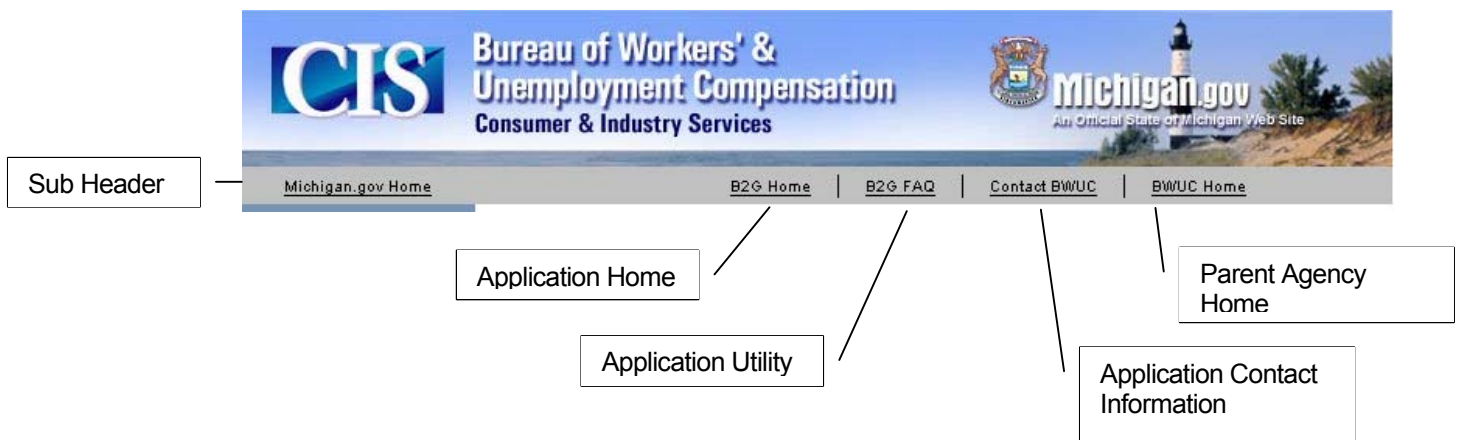

### Required and Optional Sub Header Elements

In ALL cases, a gray, sub header top navigation area appears directly below the banner header. This area follows the same width dimensions as the banner header and is always 25 pixels high. The sub header also includes embedded links; several are required. It should appear on all pages along with the banner header and footer links.

Sub Header top navigation with embedded links and optional search features. The sub-header serves as the primary space for three (3) required utility links:

1. A link back to the michigan.gov portal site
2. A home page link to the application introductory screen or home page
3. A contact link to give users a access to contact information regarding the application or specific site information such as contact email, mail or fax information.

All links are underlined server side text

Embedded HTML Links: Arial, font-size -2, Font color # 000000

Sub header Background color: Gray

HEX#CCCCCC

RGB: 204,204,204

### Far Left:

<Michigan.gov Home>

continued next page:

**Centered above Body Area:**

<ApplicationName Home>

<Contact Agency/ApplicationName>

<ParentAgency Home>

A portion of the sub header may include links that are specific to the application or depending on the application navigational needs. These also include other utility links as needed to support the application.

**Optional sub header links:**

<Site Map>

<FAQ>

<Search>

<Login>

**Including the Search field on applications**

The Search Field in the Sub Header is optional on applications hosted outside the Michigan.gov Technology Platform. This platform includes an automated index search engine (Inktomi) that conducts daily and weekly crawls of the entire index and seeks out and updates any new or existing content that is published in the state's content management system. Included in this search criterion are links and information that point to agency applications not hosted by the Michigan.gov platform.

Therefore, information, content or links that point to the external site that are displayed within the Vignette CDA will be identified through the search engine.

Applications may provide search functionality to their site using the Inktomi search engine directly. Alternatively, they may provide search capabilities of their own that relate specifically to content contained within the application.

To link to the Inktomi search engine, use the following SAMPLE code:

```
<form method='post' action=
```

Search URL from Parent Agency Vignette site such as:

<http://www.michigan.gov/treasury/0,1607,7-121---S,00.html>

```
id='form2' name='form2'>
```

```
<input type='hidden' name='fpSearchSubmitBtnHid' value='search'>
```

**Search Results Displayed**

The Inktomi search engine is based at the production host facility for Michigan.gov, and actively searches sites that are part of the Content Management System as well as other sites. However, if the site is not hosted by the Michigan.gov technology platform, search queries entered through your application will display results that relate only to those sites crawled by Inktomi, and not specific to your application.

## Footer

### Standard sizing and location

The remaining page element that appears at the bottom of all pages is the footer links area. This area appears directly under the main body area of the application and is centered and appears in three (3) lines of text. The overall dimension of this area depends on the number of links that appear in the Sub Header area. In all cases, all Footer links should restate the Sub Header text links.

The Michigan.gov Home, State Web Sites and all Policy links should always point to the originating Michigan.gov URL to maintain absolute version control of official State of Michigan on-line services. These policies (source code) should never be copied, altered to placed directly into the originating application.

Embedded HTML Links: Arial, font-size –2, Font color # 000000

**See Section 1 for detailed policy information regarding the footer.**

### Footer Example:

## Selecting the Appropriate Layout Standard

### Information Architecture for Applications

Applications built outside the Vignette content management system must employ a consistent Information architecture that mimics the style already in place and used throughout the entire executive branch agency web sites. This architecture was designed around a customer-focused approach and represents the current model for all site construction.

Development Teams should follow these dimensional layouts to achieve the level of consistency, user experience and service expected from official State of Michigan sites and applications.

Distinctions must be made on several levels when selecting the proper layout for the application. Much of this requires a detailed design document that identifies the process the user will go through to complete the transaction or submit the information required by the application. In addition, there may be supporting transaction material or links that will be provided for the user to complete the service.

These factors will help determine which of the three dimensional layouts should be used:

1. Will the site have a single, dedicated process flow where the user will be guided through a set of screens, from beginning to end, resulting in a final submission page?
  - a. If YES, then the Body Area Only layout will best accommodate the design
2. Will the site contain distinct, multiple sections with different results or inputs for each section?
  - a. If YES, then the Left Navigation Only layout will best accommodate the design
3. Will the site include distinct separate sections, supporting or related content, link to outside sites or include help files?
  - a. If YES, then the Left and Right Navigation layout will best accommodate the design

### Above the fold priority for primary display - 450 pixels

Overall, screen size affects the amount of visible area available to the user without scrolling. Efforts should be taken to design page layouts to include as much information above the 450-pixel limit as possible, especially on introductory and welcoming screens.

Scrolling is a necessity with most applications, but keeping critical information and navigation elements as high on the page as possible adds to the overall usability of the site.

Default installations of Microsoft Office usually result in an MS Office taskbar appearing on the desktop. The MS Office taskbar exists either along the bottom or vertically along the right side. This factor should be assumed when designing application screens and is the reason the banner header is sized at 740 pixels.

Most developers override the default browser offset values, either with CSS (such as `body {margin: 0px}`) or with HTML (`marginwidth="0" marginheight="0" topmargin="0" leftmargin="0"`).

## Information Architecture for Main Body Area

The body area is considered the workhorse of the application. Beyond left or right hand navigation, banner headers, sub-headers and footers, this is where the application does all the heavy lifting.

Much of this area is dedicated to the display of all information and content directly affecting the user interface with the application itself. This area is designed to accommodate nearly any required content or functionality that is important to the application's ability to complete State of Michigan business requirements or transactions.

There are few standards regarding design functionality other than usability issues also covered in this document. However there are issues regarding look and feel, use and display that will affect overall application layout and appearance. Addressing these information architecture issues allows users to achieve the best possible results from the application.

## Consistency with Parent Site

In the case of applications being built for specific agencies, look and feel arrangements for left and right navigation table cell colors should match those already in place through the agency's parent site hosted on Michigan.gov.

For example: an application being built for the Department of Treasury should follow the look and feel already in use at the agency site [www.michigan.gov/treasury](http://www.michigan.gov/treasury).

Developers should recognize that users are often directed to the agency's home page or site section to access many of the applications built outside of the Content Management system. Designing these external sites to "look and feel" as a connected part of the agency whole is critical to maintaining consistency. This is an excellent way to maintain official state business integrity and brand elements.

Additionally, after the launch of a third party application, even if the site is hosted on separate servers, the site is listed as content or links within the parent agency site. Additional navigation may be added for users to access the new site. It's important to maintain that cross-promotion between the sites so that users are presented with a consistent and usable format no matter which site they access.

For the remaining body areas, color selections and text colors can be manipulated for a unique look and feel consistent for that particular site.

Detailed dimensional layouts can be seen in the Figures and Examples of the Michigan.gov Look and Feel standard.

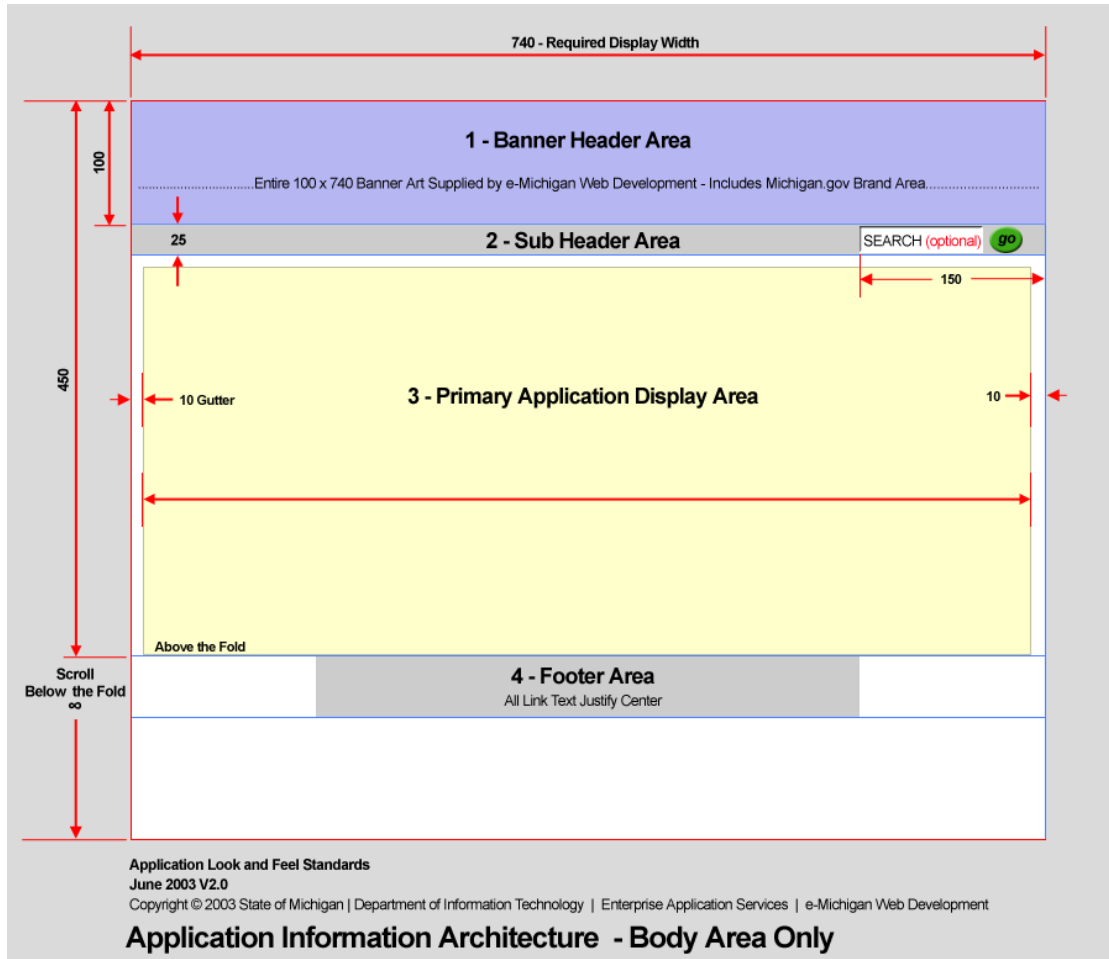

## **Body Area Gutter**

The Body Area should also contain built-in margin accommodations where text and images are not displayed, typically at the far left and right of the display area. A gutter of ten (10) pixels for all margins as they approach either side of the width (not to exceed 720 pixels) is recommended leading up to the sub-header. Regardless of whether left or right navigation is used, these gutter restrictions remain in effect.

## Body Area Only

In cases where the application will utilize the entire body area for functionality and user introduction information, and requires no navigation to separate, distinct sections, the Body Area Only can best accommodate this design.

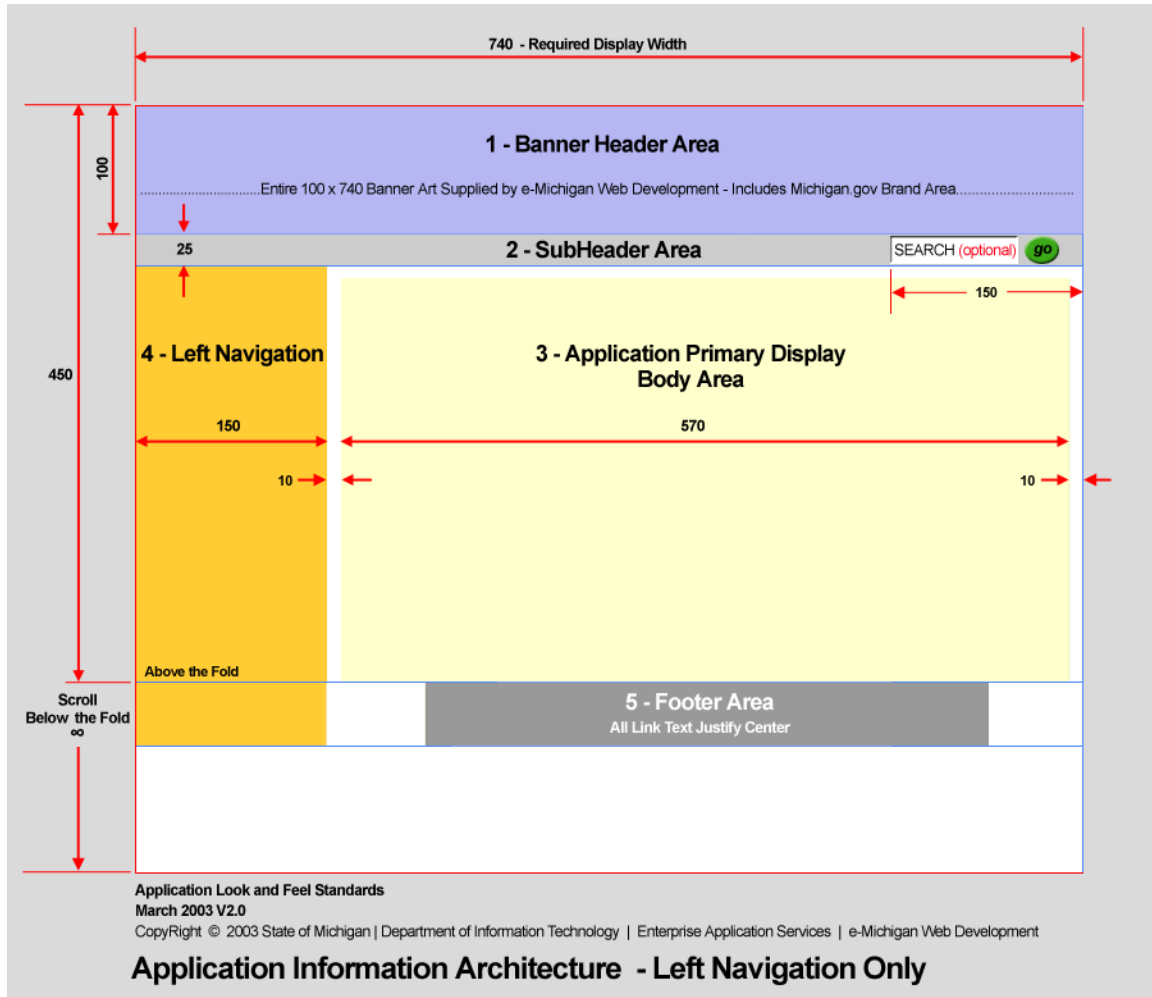

The following illustration demonstrates the dimensional layout requirements:

## Left Navigation Only

Left Navigation Only should be utilized when the application will require the user to select from different sections yielding different results, or if the application requires navigation to separate, distinct sections.

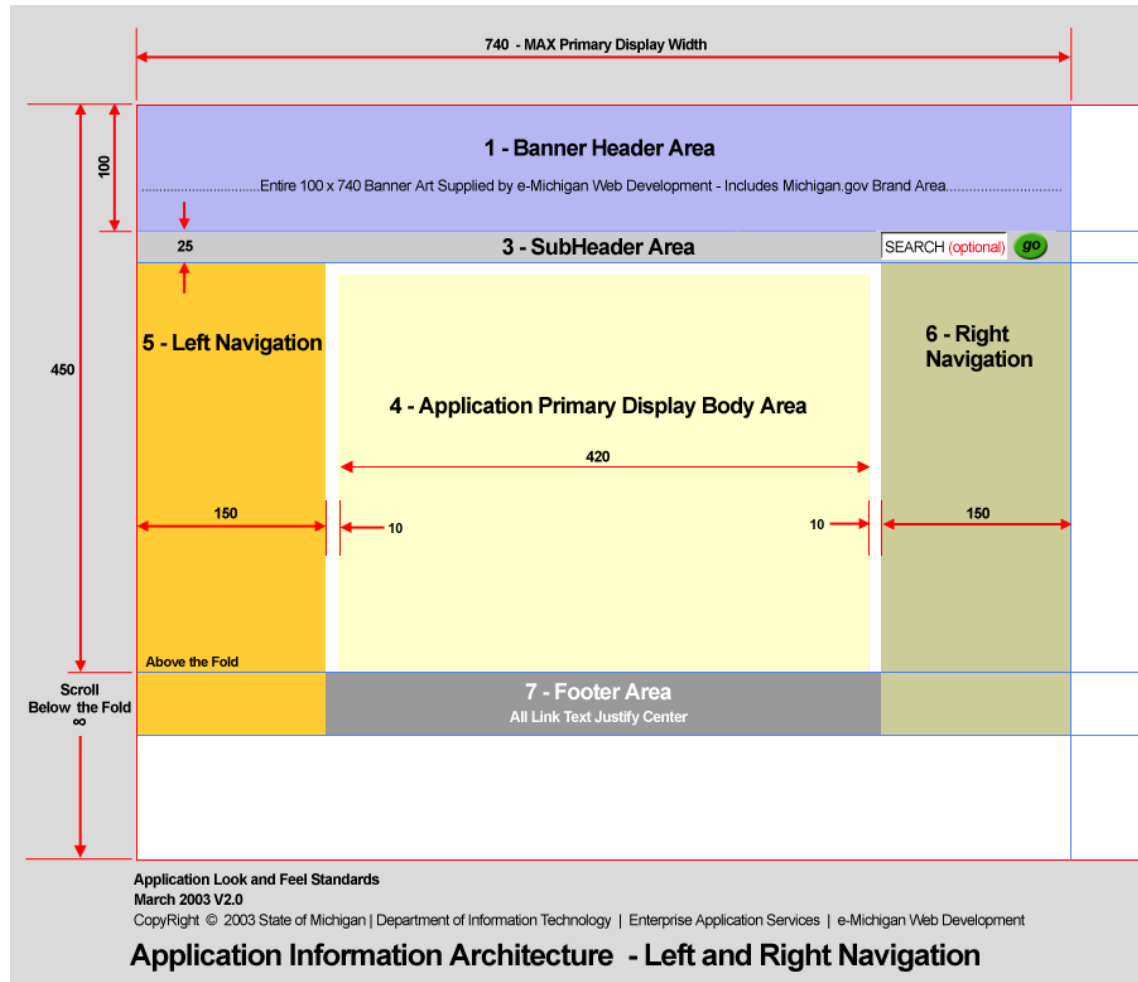

The following illustration demonstrates the dimensional layout requirements:

## Left and Right Navigation

In cases where the application will require the user to select from different sections yielding different results, or requires navigation to separate, distinct sections, and the user will be provided additional links, related content or support information, the Left and Right Navigation can best accommodate this design.

The following illustration demonstrates the dimensional layout requirements:

## Enterprise-Wide Cross Agency Banner Header type

As more and more collaboration and content sharing occurs within state government, agencies are teaming technologies and development costs to increase the effectiveness of e-government initiatives that better serve specific groups of customers. State government is continually streamlining its services by allowing more services to be obtained through a single “sub portal” site, regardless of the number or type of agencies that may be involved.

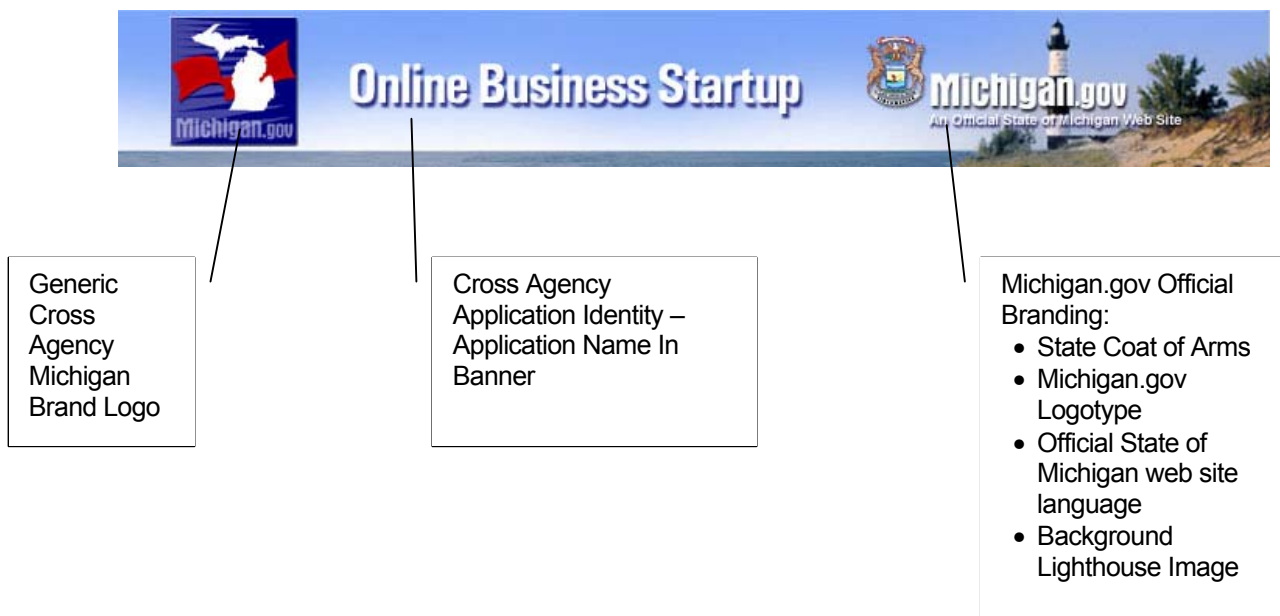

To accommodate brand identities that are composed of two or more agencies, boards or commissions, the Michigan.gov branding system has created a Cross Agency Banner Header type.

This design incorporates and is built upon many of the same features as the agency banner header, and expands on those themes to maintain consistency across the enterprise. Significant changes are as follows:

- The banner header receives a “generic” Michigan logo in place of any single parent agency brand
- The application name, program name or acronym is included in the banner header

These two important distinctions control how the banner header is designed and where it is applied. All other requirements for sub header, body area and footer remain in effect.

The following illustration is an example of the Cross Agency Banner Header style:

## Application Names, Logos or Symbols

During the design and build of applications, the need arises to formally apply the application name, existing brand identity or logo to the application home page. Development Teams often assume that the application name will appear in the banner header area. However, the standards in place for the Michigan.gov brand do not allow specific application names to appear in the banner header. This is done for several reasons:

- It establishes confidence to the user who is to receive or conduct official state business
  - It clearly communicates to the user who owns and is responsible for the application and its contents, regardless of internal acronyms or program names
- It promotes the agency's legal authority to provide the service or transaction
  - As a legal entity within the State of Michigan the Banner Header displays the text "An Official State of Michigan Web Site", the symbol of the State Coat of Arms and the Michigan.gov logotype brand (the typestyle combined with the lighthouse image)
- It displays the agency name and an associated identity that is familiar to the public
  - Users are already familiar with the parent agency and can identify with a well established symbol and name

The Michigan.gov banner header area is reserved for the parent agency of the application, regardless of the internal application business group, division or program name. This area is reserved for that brand identity only. The application name, logo or symbol is detailed in the body area.

Exceptions for Agencies, Boards and Commissions are accommodated by use of a hierarchal display grid that allows for large divisions within an agency to receive branding that identifies a separate site that serves a specific audience, but is still administered by the parent agency.

Examples include DMB and Consumer and Industry Services.

The application or program name, logo or symbol can be accommodated within the body area. Development Teams should use this area to display special acronyms, logos or symbols associated with a particular agency or program.

The following illustrations detail many of the correct treatments for branding a specific application that contains a logo, internal acronym or program name.

Correct Agency Identity – NO application name in Banner Header

The application or program name, logo or symbol can be accommodated within the body area. Development Teams should use this area to display special acronyms, logos or symbols associated with a particular agency or program.

The following illustration details many of the correct treatments for branding a specific application that contains a logo, internal acronym or program name.

The screenshot shows the Michigan Department of Agriculture website. The banner header at the top features the Michigan Department of Agriculture logo on the left, the text "Department of Agriculture" in the center, and the Michigan state seal and "Michigan.gov" on the right. Below the banner is a sub-header with navigation links: "Michigan.gov Home", "Gas Price Home", "Contact MDA", and "MDA Home". The main body area contains a search interface for gas prices, with a red gas pump icon on the left. The search form includes fields for "Enter a City name" and "Enter a Zip Code", each with a "Search" button. A callout box points to the search area, stating "Body Area with application functionality". Another callout box points to the banner header, stating "Correct Agency Identity – NO application name in Banner Header". A third callout box points to the gas pump icon, stating "Internal Program Identity, Logo or Symbol in Body Area". A fourth callout box points to the navigation links, stating "Sub Header with links". A fifth callout box points to the footer, stating "Footer". The footer contains links to "Michigan.gov Home", "MDA Home", "Sitemap", "Contact MDA", "FAQ", "State Web Sites", "Privacy Policy", "Link Policy", and "Security Policy". The copyright notice at the bottom reads "Copyright © 2001-2003 State of Michigan".
